a) Secondary cable length with a maximum of 2 m .
b) Bistable relay as relay contact. After installation, wait for short automatic synchronisation before teaching-in the wireless pushbuttons.

1) Applies to lamps of max. 150W.
${ }^{\text {2) }}$ Also max. 2 induction transformers of the same type ( L load) and electronic transformers (C load).
${ }^{3)}$ Generally applies to energy saving lamps (ESL) and 230 L LED lamps. Due to different lamp electronics, switch on/off problems and a restriction in the maximum number of lamps, however, the dimming ranges may be limited depending on the manufacturer; in particular when the connected load is very low (e.g. with 5W LEDs). The dimmer switch comfort settings EC1, EC2, LC1, LC2 and LC3 optimise the dimming range, however, the maximum power is then only up to 100 W . In these comfort settings, no inductive (wound) transformers may be dimmed.
2) Fluorescent lamps or LV halogen lamps with electronic ballast.
${ }^{5)}$ All actuators with 2 contacts: Inductive load $\cos \varphi=0.6$ as sum of both contacts 1000 W max.

* EVG = electronic ballast units; KVG = conventional ballast units

Eltako Wireless is based on the EnOcean wireless standard for 868 MHz , frequency 868.3 MHz , data rate 125 kbps , modulation mode ASK, max. transmit power $7 \mathrm{dBm}(<10 \mathrm{~mW}$ ).
