

GFVS-Comm

Data communication packet M2M for the Smart Home control units GFVS-SafeIV und GFVS-PowerSafeIV with GSM modem. With a data flat rate for 2 years.

Provided an internet access exists, external communication between the GFVS-SafeIV and GFVS-PowerSafeIV with GSM modem and the software GFVS 4.0 and smartphones and tablet PCs are charged by their flat rates. GFVS-Comm is not required for this.

However, if data exchange is without local internet access, the standard M2M card running GFVS-Comm integrated in the GSM modem must be activated to exchange data over the mobile radio network.

The GFVS-Comm therefore receives prepared M2M contracts with a data flat rate for two years. Access contracts are offered automatically.

GSM is the Global System for Mobile Communications which is used for mobile radio (D and E networks in Germany) and to exchange data packets.

The M2M card is activated shortly after receipt of a data flat rate contract.

This communication is encrypted to a very high standard and is very simple to configure with the new **Eltako quickcon® technology**.
