

# Wireless Mini Hand-held Transmitter FMH2S-wr for Calling Systems

## FMH2S-wr

## Wireless mini hand-held transmitter for calling systems

**Wireless mini hand-held transmitter for calling systems 43x43 mm, 16 mm high. Weighs only 48 grams. Generates the power for wireless telegrams itself when the button is pressed, therefore there is no battery.**  
**Smart Home sensor.**

**The mini hand-held transmitter FMH2S-wr without battery for calling systems has a pure white rocker with red lettering and a grey carry strap.**  
It transmits a wireless telegram to the Eltako wireless network each time you make a confirmation (by pressing on the red button).  
When operated (by pressing on the red button) it transmits the same wireless telegram as a wireless pushbutton and can therefore be taught-in in actuators and the GFVS software in the same way. If it will be taught-in in an actuator as ‚central on‘ as an emergency call switch the emergency can only be received with another taught-in switch with ‚central off‘.  
**The wireless modules integrated in the mini hand-held wireless transmitter can be taught-in encrypted as described in the operating instructions in all encryptable actuators of the Series 61 and Series 71 as well as the FAM14. This requires the FTVW wireless pushbutton encryption rocker on page 8-5. Encryptable actuators bear the pictogram**  

WEEE registration number DE 30298319
