

FSRP-230 V**1- and 2-level wireless socket repeater. Only 0.9 watt standby loss.**

Adapter for German fused safety socket. With increased shock protection.

This repeater is only needed if the building conditions do not allow undisturbed reception or the distance between the wireless pushbutton and receiver is too great.

The 1-level mode is activated ex works. Only the signals are received, tested and retransmitted at full transmit power. Wireless signals from other repeaters are ignored to reduce the data volume.

To switch to the 2-level mode, the *level 2* button has to be pressed for 3 seconds. Now the wireless signals of another 1-level repeater are being processed. Thereby a signal can be received and amplified with a maximum of two times. To return back to the 1-level mode, the *level 1* button has to be pressed for 3 seconds.

Wireless repeaters need not be taught-in. They receive and amplify signals from all wireless sensors within their reception area.

The LED indicates recieved wireless telegrams by briefly flashing during operation.
